

In the Specification:

Please amend paragraph [10] at page 2, line 25 to page 3, line 7 as follows:

[10] In accordance with embodiments of the invention, the tire dressing composition comprises at least a film-forming polymer liquid dispersion. Preferred compounds used as film-forming polymer liquid dispersions include, but are not limited to, aqueous polyurethane dispersions; urethane-acrylic copolymers; natural rubber lattices, such as pre-vulcanized rubber latex; or synthetic rubber lattices. In an embodiment of the invention the film-forming polymer dispersion is present at a concentration of 20%-100% by weight of the composition. In an alternate embodiment of the invention, the film-forming polymer dispersion is preferably present at a concentration of 40%-80% by weight of the composition. In an embodiment of the invention, the aqueous polyurethane dispersions comprise, solids content of at least 20% by weight, or more preferably 30% by weight; volatile organic compounds at less than 20% by weight, more preferably less than 10% by weight, and most preferably less than 3% by weight; a pH range of 4-10, or more preferably between 5.5 and 9.5; and a viscosity ranging from 10 to 10,000 cps, or more preferably between 50 to 5000 cps.
